EXPERIENCE

Tata Elxsi **Bengaluru, India** March 2024-Current

Software Engineer

Full-stack developer with experience building and deploying Generative AI applications. Skilled in integrating AI models into scalable production systems, developing end-to-end solutions across both front-end and back-end stacks. Experienced in designing data-driven applications, optimizing system performance, and delivering user-focused products that leverage modern AI technologies.

Inventeron Technologies **Bengaluru, India** March 2022

Web Developer Intern

Designed an intuitive user interface for a shopping website, improving the overall browsing experience. Applied responsive design principles to ensure smooth functionality across various devices.

PROJECTS

Smart Executor Python

Smart Executor is an AI-powered mobile automation system that uses Generative AI agents to execute end-to-end workflows on Android and iOS applications. The project is built using an agent squadbased architecture as well as an Appium MCPbased automation framework, enabling different approaches for orchestrating and running mobile test flows. It leverages LLM-based agents for planning and reasoning around user actions, while integrating with mobile automation tools to interact with real application interfaces. This enables automated execution of complex user journeys, validation of app behavior, and reduced manual effort in mobile QA processes through intelligent automation.

GenAI Dashboard Python|NextJS|CSS|MySQL

This project is a GenAI dashboard that aggregates usage data from GitHub Copilot and AWS,visualizing key metrics in graphs, while storing user information in MySQL to provide insights on system performance and engagement.

Standalone Chatbot Python Flask|Langchain|ReactJS|MongoDB

This project features an AIpowered chatbot that efficiently handles administrative inquiries by processing and extracting answers from userprovided documents. It engages in natural dialogue, enabling easy access to relevant details and adapts to improve accuracy and efficiency over time.

Smart Dustbin for Domestic Usage Arduino|IOT

This project features an AIpowered chatbot that efficiently handles administrative inquiries by processing and extracting answers from userprovided documents. It engages in natural dialogue, enabling easy access to relevant details and adapts to improve accuracy and efficiency over time.

EDUCATION

Malnad College of Engineering 2023

BE in Computer Science Hassan, Karnataka

Expert Pre-University College 2019

Pre University Manglore, Karnataka

United High School 2017

High School Hassan, Karnataka

SKILLS

OS: Windows

Languages: Python, JavaScript, HTML/CSS

Frameworks: Flask, Node.js, React.js (Full Stack Web Development)

Databases: MySQL, MongoDB, VectorDB [Qdrant]

ACHIEVEMENTS

Generative AI with Large Language Models - Coursera
Learn Python : The Complete Python Programming - Coursera
Received an Extra Mile Award at Tata Elxsi for outstanding contribution and performance in project work
